7. Bad Case 与能力边界

EXP-02 - Aggregation Error

现象：本月费用合计；原因：SQL 生成错误：多个科目 OR 条件必须整体加括号后再与时间、状态和维度条件组合；影响：User question does not produce an executable answer；建议：Strengthen validated Join Path prompting and post-generation join checks。

regression-command - Regression Error

现象：regression-command；原因：exit code 1；影响：Automated test baseline is not green；建议：Inspect the captured command output and repair without weakening assertions。

结论

当前版本具备 Demo 级能力，并达到有条件 POC 水平；尚不具备 Production Readiness。生产化前必须清理现有渲染回归债务、固化状态/币种/会计期间租户配置、扩大真实 ERP 题集与跨租户鉴权验证，并开展并发、容量、灾备和审计测试。
